## Profile

After worked with startups, research labs, and enterprises, always solving real problems. Dublin City University gave me a chance to collaborate with Dr. Enda Donlon and Dr. Peter Tiernan to design a VR classroom simulation that captured and analyzed student interactions in real time with reaserch based data collection. With Trafasa , I ran AI analysis on live data to give response and realtime help to the customers.

My journey has been entirely self-taught through hands-on projects, YouTube tutorials, and open-source contributions. I've built 20+ GitHub repositories, ranging from VR engines and automation tools to data analytics workflows and multiplayer game prototypes.

I thrive on challenges that combine creativity and problem-solving — whether it's optimizing databases, designing immersive learning environments, or exploring game mechanics. Currently, I'm excited to keep building in the areas of software development, VR/game design, and data-driven applications, while collaborating with teams that value innovation, curiosity, and impact

## Education

M.Sc. in Data Analytics

Dublin City University, Dublin, Ireland | Aug 2021 – Aug 2023

*Thesis:* Financial narrative Summarization

B.Tech. in Computer Science

SRM Institute of Science and Technology, Chennai, India | Jul 2016 – May 2020

*Thesis:* Cloud Hack Detection System using Machine Learning

## Work Experience

**AI Developer** | Trafasa ltd | Dec 2025 – Present

- Created a solution for 2k customer, seeing 40% improvement in workflow
- Creating a **AI system** to respond to customer queries as their supplier's substitute.
- Working with Ollama : **llama 3.2 3B, 7B models**.
- Creating custom workflows for each customer and helping them along the way.
- Automated handling of large-scale business requirements.
- Working with Frappe (Python backend) and REACT (NEXTjs frontend).

**Freelance Developer** | Fineax LLC | Sep 2021 – Nov 2025

- Built DICOM data anonymization automation software (**Python, Boto3, PyDicom**).
- Automated handling of large-scale medical datasets for secure processing.
- Collaborated with medical data specialists to streamline workflows.

**Research Assistant** | Dublin City University, Dublin, Ireland | Mar 2023 – Jul 2025

- Designed and developed VR classroom simulation (**Unity VR**) with 3D assets.
- Integrated **Python Flask** backend APIs to securely store headset experiment data.
- Built a web-based data visualization platform for VR research results.
- Collaborated closely with **Dr. Enda Donlon** and **Dr. Peter Tiernan** on educational technology research.

## Software Developer | Softech ERP Solutions Pvt Ltd, India | Jan 2021 – Aug 2021

- Sole developer of ERP system (Core **PHP, MySQL, CPanel**) for Intime Ltd, serving 500+ employees nationwide.
- Conducted requirement analysis by interviewing stakeholders and mapping workflows.
- Improved efficiency by 80–90% and enabled weekly processing of 20GB+ transaction data.
- Recognized for independent ownership and successful delivery of enterprise-scale ERP solution.

## Internships & Startup Projects | India | 2017 – 2020

- Ashvau: Built real-time online inauguration system (**NuxtJS, MongoDB**) with 220+ global users.
- Repairbuck: Integrated backend–frontend (**Ruby on Rails, PostgreSQL**) for a tech repair app, scaling to 150+ users in 4 months.
- Hackathon: Developed hospital management system (**Python Flask**) enabling faster, transparent transactions; led backend team of 3.

## Academic & Leadership Activities

Product Manager & Error Analyst, Cognitive Application Research Lab (CARL), SRM Institute.

- Created *bulk email system* (Java) and *WhatsApp messenger* (Python scraping) resistant to blocking.
- Hosted Google AI | Explore ML workshop; hosted and delivered basic programming-to-ML session.
- Recognized by Google AI representative with Certificate of Appreciation for clarity and depth.
- Mentored junior lab members in debugging, error analysis, and project workflows.

## Open-Source & Personal Projects

Highlighted Repositories | GitHub: [github.com/Zelone](https://github.com/Zelone)

- Game Engine – Custom 2D/3D game engine prototype.
- HadoopDCU – Big Data processing project using Hadoop ecosystem.

Additional 10+ repositories spanning automation, data visualization, and frameworks.

## Technical Skills

Languages: Python, Java, C++, PHP, JavaScript

AI Models: Transformer based, knowledge base(context edits), training models

CI/CD: ArgoCD, Jenkins, Kubernetes, Camunda.

Frameworks/Tools: Flask, Ruby on Rails, NuxtJS, Unity VR, NextJS, Frappe,

Databases: MySQL, MongoDB, PostgreSQL, Oracle PL/SQL

Cloud & Automation: AWS Boto3, PyDicom, Data Pipelines

Strengths: Machine Learning, Data Analytics, ERP Systems, API Integration, Full-Stack Development

Learning Path: Entirely self-taught via YouTube tutorials, documentation, and project-based exploration.
